WHO WE ARE:

- Myriad Engineering, Inc. has been committed to delivering proven water resources project results to public and private clients. **Deana Donohue's 26-year career** in water and wastewater infrastructure design and planning provides expertise with streamlining water infrastructure solutions from conception to construction.
- We have extensive experience with managing projects with multiple stakeholders, we understand projects require excellent communication and ease of availability to project information for all team members.
- We have developed a proven project management documentation system to improve deliverable quality and schedule management. Key decisions and comments are recorded throughout the design process to focus team members on accomplishing the clients' strategic objectives.
- Our consulting engineers are focused on providing integrated, collaborative, and beneficial approaches for each project. We consider constructability from the start of every project for a more practical project solution. We identify risks early to prevent project delays or change orders.
- Our turnaround time depends on the project's complexity; for minor projects (less than \$5K) we can complete in 2-3 days, while projects up to \$50K can be completed in 3-4 weeks as required. We are a small team with flexibility.
- We incorporate client-feedback and document the revisions to improve overall project efficacy.

WHAT WE DO:

We specialize in Water & Wastewater Engineering Solutions

Primary services we provide:

- Water/Wastewater System Master Planning & Hydraulic Modeling
- Underground Fire Service Design (NFPA 24)
- Water/Sewer Pipeline Design

Other Services we have successfully provided:

- Water/Wastewater Infrastructure Design
 - ✓ Pump Stations
 - ✓ Hydraulic Structures
 - ✓ Small Treatment Facilities
- Feasibility Studies
- Project/Program Management
- Construction Support Services
- Value Engineering/ Project Peer Review
- Drafting CADD Services
